

Terraform Question #147

QUESTION:

How does Terraform determine dependencies between resources?

A.

Terraform automatically builds a resource graph based on resources, provisioners, special meta-parameters, and the state file, if present.

Most Voted

B.

Terraform requires all dependencies between resources to be specified using the `depends_on` parameter

C.

Terraform requires resources in a configuration to be listed in the order they will be created to determine dependencies

D.

Terraform requires resource dependencies to be defined as modules and sourced in order
