

Terraform Question #179

QUESTION:

Why should secrets not be hard coded into Terraform code? (Choose two.)

A.

It makes the code less reusable.

Most Voted

B.

Terraform code is typically stored in version control, as well as copied to the systems from which it's run. Any of those may not have robust security mechanisms.

Most Voted

C.

The Terraform code is copied to the target resources to be applied locally and could expose secrets if a target resource is compromised.

D.

All passwords should be rotated on a quarterly basis.
