

Terraform Question #333

QUESTION:

A module block is shown in the Exhibit space of this page.

When you use a module block to reference a module from the Terraform Registry such as the one in the example, how do you specify version 1.0.0 of the module?

A.

You cannot. Modules stored on the public Terraform Registry do not support versioning.

B.

Add a version = 1.0.0 attribute to the module block.

Most Voted

C.

Nothing. Modules stored on the public Terraform module Registry always default to version 1.0.0.

D.

Append ?ref=v1.0.0 argument to the source path.
