Suggested Answer:

-out=FILENAME

Reference:

<https://www.terraform.io/docs/cli/commands/plan.html>

You can use the optional `-out=FILE` option to save the generated plan to a file on disk, which you can later execute by passing the file to `terraform apply` as an extra argument. This two-step workflow is primarily intended for when *running Terraform in automation*.

If you run `terraform plan` without the `-out=FILE` option then it will create a *speculative plan*, which is a description of the effect of the plan but without any intent to actually apply it.

ANSWERS:

CORRECT ANSWER(S):

- -out=FILENAME
