

Terraform Question #99

QUESTION:

You need to deploy resources into two different cloud regions in the same Terraform configuration. To do that, you declare multiple provider configurations as follows:

What meta-argument do you need to configure in a resource block to deploy the resource to the `us-west-2` AWS region?

A.

alias = west

B.

provider = west

C.

provider = aws.west

Most Voted

D.

alias = aws.west
